NORDIC ROOTS

Straight lines and elegant curves underline the natural range of materials. Wooden structures go hand in hand with shades of pastel and grey.

KARA

With its distinctive base blocs, “Kara” being a straight railing handle conveys absolute stability. Due to the geometric curves at both ends and its slightly rounded edges, it still looks elegant and offers a smooth grip.

VINTAGE FLAIR

Modern style elements
in contrast to old wooden structures,
earthy shades of grey and
chalky surfaces.

CURVE

Extravagant, self-confident, dynamic and high-quality. Our "Curve" handle is characterized by its pleasant tactile properties and individuality available in different surface finishes. Depending on which way the light falls on the handle, multi-layered reflections appear.

INDUSTRIAL STREAM

Industrial structures combined with metal, chrome, rust and concrete. Straight lines and geometric curves convey massive materiality. Black, grey and earthy shades are put into the focus.

BOW TIE

Our “Bow Tie” furniture handle catches the eye at first glance with its strictly geometric design. Becoming wider at its ends, its elegant and extensive appearance gains visual and constructional stability which is underlined by discreetly designed bases.

ORNAMENTAL ELEGANCE

Curved, soft lines with an organic look or pure geometric, faceted shapes create decorative structures. Gold, silver and chrome set additional accents.

CYLINDER

With its dynamic, cone-shaped base elements, “Cylinder” makes a round statement. The clear conical, geometric structure underlines its architectural appearance without affecting the ergonomics.
