R-EVOLUTION

Our unique push-to-open locking system not only revolutionises the installation of locks and functional buttons, but also enables – thanks to its patented design – the implementation of new and proven designs with particularly precise and low-noise operation. The entire concept – from technology and materials through to sustainable packaging – also impressed the jury of the Red Dot Design Award 2024.

SHELLY IN THE DESIGN FAMILY

SHELLY and SHELLY SL follow our elegant, geometric design language and integrate perfectly into the existing design family. This allows a wide range of functions in vehicle interiors to be designed in a visually harmonious way.

LOCKING SYSTEMS R-EVOLUTION

PATENTED TECHNOLOGY

Our locking system R-EVOLUTION consists of **only two installation units** that are screwed to the panel.

- 1 Functional knob, escutcheon and push-to-open mechanism are integrated in **one single component**.
- 2 The lock contains the bolt mechanism as well as the mounting concept with pre-assembled M4 screws.
- 3 The panel routing is matched to the fitting design, can be radially drilled or contour-routed and enables a precise fit.
- 4 Fitting and lock interlock precisely and are fixed by screwing on the furniture front. **Front screwing is not required and height adjustment of the knob by rotating the lock is not necessary.** The knob always fits.
- 5 R-EVOLUTION is designed for front thicknesses from 14.5 to 19 mm and, with an additional spacer element, is also suitable for thicknesses from 9 to 14.5 mm. **The system is therefore versatile and can be used across a wide tolerance range.**

R-EVOLUTION levitate

The new **R-EVOLUTION LEVITATE** series presents borderless push-in knobs with an almost invisible base, elegantly concealed by the functional element itself. This creates the impression that the knobs float above the surface – an aesthetic detail that perfectly combines function and design.

DOOR HANDLE SETS IN A MODULAR SYSTEM

With our modular door handle system, you can develop individual door solutions that perfectly match your vehicle concepts. All components – handle, escutcheon, square spindle and lock – can be freely combined, giving you maximum flexibility in design, function and installation.

1 Handle

Choose the appropriate handle from various design lines and colour variants to harmonise with your interior. Whether elegant or functional – each handle becomes a visual and tactile highlight.

2 Escutcheon

Whether without additional function, with return spring or with integrated door locking – we offer exactly the solution that meets your requirements.

3 Square spindle

Select the square spindle according to the door leaf thickness.

4 Lock

With three lock variants, we offer flexible options – from a simple interior latch to a functionally optimised solution. This allows you to implement door systems that fully meet modern requirements in caravan and motorhome construction.

HANDLE SYSTEMS

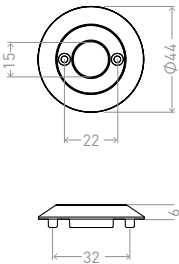

56095.0084

Escutcheon round | plastic
without function

Art. No.	Description	Mat.	PU
56095	for handle 56083	ABS	200
